

REDUCING REDUNDANCY IN PEER REVIEW

A close-up, black and white photograph of a palm frond, showing the intricate, overlapping structure of the leaves. The frond is positioned diagonally across the frame, creating a strong sense of depth and texture.

Fabio is a researcher. He is passionate about race cars and has submitted a paper about how choosing the colors of the flag of Italy for the race car affects their velocity in the races, and the data that he has used is from the car race gamblers.

He is so excited to publish it asap, so it can catch the attention of Ferrari asap before the next Formula 1, so **Charles Leclerc** can use it.

So, he would submit it to publisher A, and he gets rejected (SURPRISINGLY!)

So he submits it to 2 other publishers, **OBVIOUSLY!**

What do you think will happen?

INEFFICIENT WORKFLOW

REVIEWER 1

REJECTED

REVIEWER 2

REJECTED

REVIEWER 3

For every published paper, there are many more reviews
conducted - including papers that get rejected

waste of time and resources

“Many manuscripts get reviewed at multiple journals, which is a major inefficiency”

On average, a manuscript is submitted to two journals before acceptance (Jiang et al., 2019)

How could this time be spared?

“Should the reviews of a previous submission be available to the journal of the new submission, reviewing time could be substantially reduced”

Solution

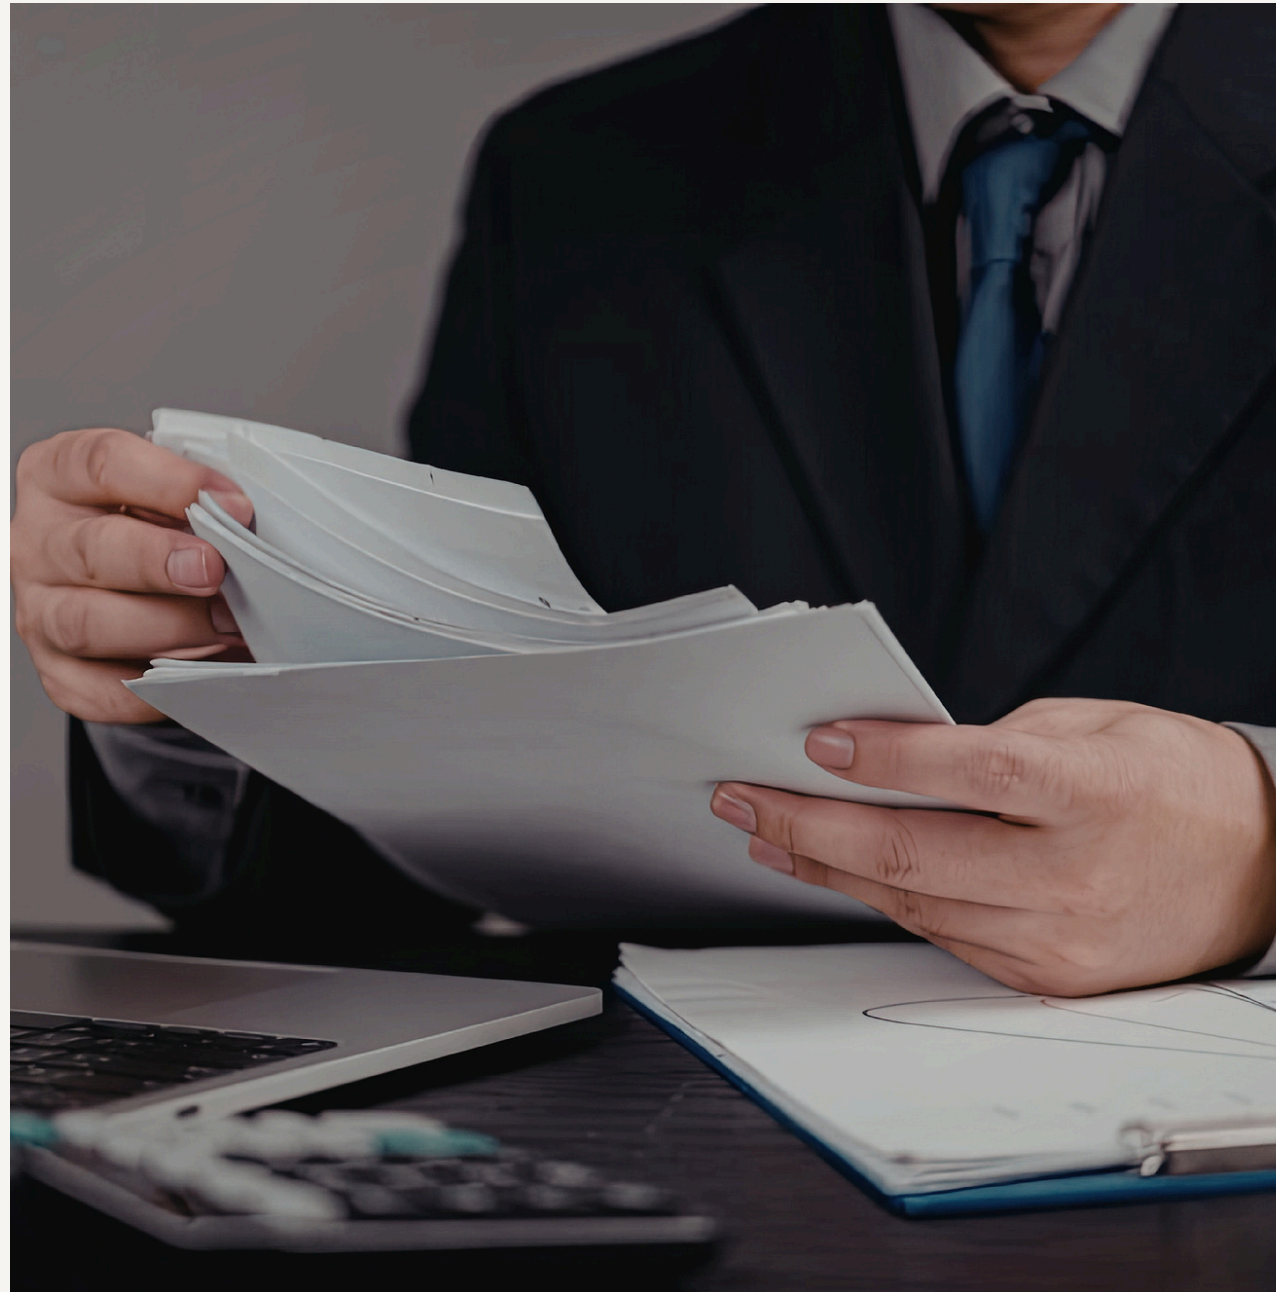

Cascading Peer Review

What is it?

Some publishers (such as PLOS and Nature) **share reviews across their own suite of journals** so that a manuscript rejected by one can be considered by another without starting the review process from scratch

Solution

Reviewing Preprints

What is it?

some journals allow authors to have their **preprints reviewed independently**. These reviews can then be used by various participating journal publishers to make editorial decisions

“Some journals openly publish the reviews they solicit”

So Fabio only get rejected once and save everyone's time.

Recommendations

- 01 <https://elifesciences.org>
- 02 <https://open.lnu.se/index.php/metapsychology/index>
- 03 <https://plos.org>

More Journals could do that and save reviewers' life!

Thank
You
